

MARWAN GRADA

UX/UI Designer

PROFILE

I like to call myself a "Problem Solver" as that is what UX design means to me - finding solutions to problems using a design-centric approach. With a background in business and a Masters degree in Education and Cognitive Psychology, I work at the intersection of humans and technology to design products that listen to the users' needs.

I love creating aesthetically pleasing, functional web products with rock-solid code. Turning complex problems into simple beautiful and intuitive interface designs with more than 4 years experience, from brainstorming and wireframes, to prototypes and production-ready assets. Apply user-centered design and design thinking in order to connect customer needs with business objectives. My toolkit includes Adobe XD, Photoshop, Illustrator, HTML5, CSS3, JavaScript (React.js, JQuery, Node.js) Bootstrap and Wordpress.
